Experience

Logic Silicon

June 2026 – Present

DevOps Engineer

Islamabad, Pakistan

- Orchestrated end-to-end lift-and-shift and re-platforming migration of 3+ enterprise workloads to AWS with zero downtime, by leveraging AWS Application Migration Service (MGN) and AWS Database Migration Service (DMS) for heterogeneous data and server migration.
- Accelerated infrastructure provisioning by 40%, by architecting scalable, immutable infrastructure using Terraform (IaC) with policy-as-code security enforcement via tfsec, and automating configuration drift management using Ansible playbooks.
- Achieved 99.9% application availability and elastic auto-scaling, by containerizing microservices and ML inference workloads with Docker and orchestrating deployments via Kubernetes (K8s) for self-healing, horizontal pod autoscaling.
- Reduced compute overhead and hosting costs by 20%, by deploying serverless and containerized workloads on AWS Fargate and EC2, with traffic distribution managed through Application Load Balancer (ALB) and edge caching via CloudFront CDN.
- Enabled continuous deployment with zero manual intervention, by implementing GitOps workflows and Helm Charts for declarative, version-controlled Kubernetes application delivery.
- Shrunk release cycle time by 30% and shifted security left, by engineering enterprise-grade CI/CD pipelines in Jenkins with integrated static application security testing (SAST) via SonarQube and container image vulnerability scanning via Trivy.
- Reduced Mean Time to Detection (MTTD) and Resolution (MTTR) by 35%, by implementing full-stack observability with Prometheus for metrics collection, Grafana for visualization, and AWS CloudWatch for centralized log aggregation and alerting.
- Boosted ML inference response time by 25%, by integrating Redis for low-latency in-memory caching and Pinecone vector database for high-performance semantic/similarity search in retrieval-augmented (RAG) ML pipelines.

Rapids AI

June 2025 – June 2026

Jr. DevOps

Islamabad, Pakistan

- Deployed Hyperledger Fabric blockchain (Go chaincode, CouchDB, NestJS HLF Gateway) on Kubernetes, enabling permissioned production transactions with zero public infrastructure dependency.
- Containerized NestJS microservices via Docker & Docker Compose, achieving 100% cross-environment deployment consistency.
- Automated CI/CD via GitHub Actions to build & push Docker images to Docker Hub, reducing manual release effort by 100%.
- Implemented GitOps via Helm Charts for dynamic image tag updates, achieving zero manual deployments.
- Integrated Argo CD Image Updater & Istio for gRPC microservices, enabling auto cluster sync with 0% manual intervention.
- Optimized Kubernetes deployments via YAML & Helm with rolling updates, achieving 0% downtime during releases.
- Provisioned high-availability infrastructure on OpenStack (Magnum) & VMware, ensuring 99.9% uptime.

CyberSoft Vantage

June 2024 – September 2024

DevOps Intern

Islamabad, Pakistan

- Automated infrastructure deployment by developing scripts with Terraform, Ansible, and Python, reducing provisioning time by 40%.
- Improved deployment efficiency by optimizing CI/CD pipelines with Jenkins and Docker, achieving a 30% faster release cycle and minimizing downtime.
- Enhanced cloud scalability by configuring and managing AWS and Kubernetes clusters, leading to a 25% increase in system performance.
- Reduced incident response time by 50% by collaborating with cross-functional teams to troubleshoot and resolve infrastructure issues.

Projects

Production-Grade MERN Stack on AWS EKS with DevSecOps Automation | AWS EKS, Jenkins, ArgoCD, Docker, Kubernetes, Helm

- Deployed cloud-native MERN application on AWS EKS with secure DevSecOps pipeline, achieving zero-downtime deployments and enterprise-grade reliability.
- Integrated CI/CD automation using Jenkins and GitOps with ArgoCD, reducing deployment time by 60% and ensuring consistent releases across environments.
- Implemented security scanning with SonarQube and Trivy, monitoring with Prometheus and Grafana, enhancing application security and providing real-time observability for improved system performance.

CI/CD Automated Website Deployment | GitHub, Docker, Jenkins, Kubernetes, AWS, Maven, Slack, Webhooks

- Implemented CI/CD pipeline using Jenkins, Docker, and Kubernetes, reducing deployment time by 50% and improving system reliability through automated build processes.
- Optimized AWS infrastructure achieving 99.9% uptime and improved scalability by automating Docker and Maven workflows, increasing deployment efficiency by 40%.

Containerized Microservices Application | Docker, Kubernetes, Helm, Jenkins, AWS EKS/GKE, Node.js, Python

- Containerized microservices using Docker and orchestrated deployments with Kubernetes and Helm charts, improving application availability and fault tolerance across distributed systems.
- Optimized application performance and scalability across multiple programming languages, ensuring seamless inter-service communication and efficient resource utilization.

Education

Air University, Islamabad

2022 - 2026

Bachelor of Science in Information Technology

Technical Skills

DevOps & CI/CD: Git, GitHub, Jenkins, GitHub Actions

Containers & Orchestration: Docker, Kubernetes, Istio, Helm

Cloud & Infrastructure: AWS, OpenStack, DigitalOcean, Vercel, Contabo, Terraform, Ansible

Programming & Scripting: Python, Bash, FastAPI, Flask

Monitoring & Messaging: Prometheus, Grafana, Kafka

Web & Databases: Nginx, MongoDB, MySQL, PostgreSQL

Operating Systems: Linux (Ubuntu, CentOS), Windows
